## Direct to screen

This unit is perfect for any busy screen room looking to reduce labour, improve print quality and speed up job turnaround. The DTS Imaging System simplifies the screen making process by generating high-resolution opaque images directly on to coated screens without the use of traditional film.

Supplied complete with the MHM pin registration system,
set-up times are significantly reduced by virtually eliminating the need for the screens to be registered on-press, and with no further need for the vacuum hold down or the glass surface on the exposure unit, 'pin-holes' and 'touching-in' will become a thing of the past.
